

QUICKJACK™

Alternate P/U

HYDRAULIC POWER UNIT

If you already have a QuickJack equipped with a 12V DC power unit, but you'd like to utilize 110V power outlets or visa-versa, this is the perfect add-on accessory. Our latest model is lighter, features fittings that screw directly into the power unit and has a built-in handle for user convenience.

Our miniature hydraulic power unit is a rugged and very reliable hydraulic power source that delivers huge performance. Its compact size means it's lightweight and easy to transport. An integrated flow divider / combiner valve equally proportions the hydraulic fluid allowing both QuickJack frames to remain synchronized during operation. The pendant control is constructed out of high-impact, highly visible plastic and comes standard with a 13' cord. High quality starter ensures long life and a fast start every time. Built to weather harsh conditions and provide consistent performance for years.

Available in 110-volt AC, 220-volt AC and 12-volt DC versions.

- Lift / hold / gravity down
- Dual fluid-out ports
- High-power
- Smooth operation
- Gear pump
- 100% factory tested
- Low maintenance
- Aluminum central manifold
- Remote pendant control on 9' cord
- Integrated flow-control and flow-divider
- Built-in 2000-PSI PRV
